Technical Skills

Typescript/Javascript — Advanced

NodeJs — Advanced

NestJs — Advanced

Express — Advanced

Source Control (Git & Github) — Upper intermediate

Web Sockets — Upper intermediate

GraphQL API — Upper intermediate

REST API — Upper intermediate

PostgreSQL — Upper intermediate

SQL — Upper intermediate

MongoDB — Upper intermediate

Hausra (gql engine) — Intermediate

Redis (Queuing & Caching) — Intermediate

Springboot/Java — Upper intermediate

AWS-S3 — Elementary

Other backend languages:
Python, PHP, C++, C

Frontend Skills: Flutter, Angular, React.

Frontend languages: HTML, CSS, Vanilla Js, , BootsTrap, CSS, SCSS, Tailwind CSS, JQuery, Dom Manipulation

Other skills: VS Code, IntelliJ Idea, Linux, Windows

Highest Education

2018-03 - 2022-06

B. Tech: Computer Science And Engineering
West Bengal University Of Tecchnology - West Bengal, India

Work History

2022-05 - 2023-06

NodeJs Backend Developer (1+ Years)
Pietech Solution Private Limited, Bangalore, India

- **Proficiently** developed **documented**, **secure** and **reliable** REST APIs, GraphQL APIs, and micro-services using **NestJS** and **TypeScript** in so many projects to use its **modularized architecture** for **scalability** and **easy codebase management.**

- I worked on a project related to **health & fitness** where I acquired the Skills in **event-based application development** using **Redis queues** to run complex and time taking process in background to **improve user experience.**

- I have skills in **agile development** too, I have completed a project called Home Service **in just 4 months despite the given time** of 6 months. I **drastically improved** its performance by handling **complex logics** writing raw DB queries rather than handling it on server which would result in **increased latency** and **server load**.

- I successfully **led the team** and had the **responsibility** for it's **management** for all its **3 apps(User, Agent/Delivery boy, CMS)** for "Home Service".
I **had to plan all the APIs** accordingly then create tasks and assign it to my team and myself which takes **strong leadership skills**.

- **Configured** the whole project and built all the backbone features like the **authentication system**, **product-cart-order-checkout-history** flow, **file uploading**, **messaging** then synced this flow with the delivery boy and CMS APIs, **ratings and reviews**, etc. then **integrated** all **third party services** like OneSignal(push-notifications), Twilio(OTP and SMS sending), Stripe(Payment gateway).

2020-01 - 2021-11

MEAN Stack Engineer Trainee
Ardent Internship & Training, Kolkata

- First place to work in a team. Every week two mock interviews improved my **communication** and **team work.**

- Working on random type of projects everyday taught me **the time management as a developer.**

2017-02 - 2021-08

Freelancing (2 Years Effective)
Self-employed, Kolkata

- Developed 5+ projects in this main learning curve of mine for my **local businesses,** some projects are in my portfolio given above.

Certifications

2022-03

Data Structures And Algorithms. (Check my portfolio) Link: https://www.mindluster.com/profile#c_cer

2021-11

MEAN Stack Front To Back (Check my portfolio) Link: https://www.mindluster.com/student/certificate/11385339 5

2022-02

Basics Of Android App Development Certificate Course (Check my portfolio)
